

Hospital Management System - Easy Architecture & Working

Architecture

1. Presentation Layer: Login, Admin Dashboard, Staff Dashboard.
2. Business Layer: Python handles validation, CRUD and logic.
3. Database Layer: MySQL stores Admin, Staff, Doctor, Patient, Appointment, Billing, Medicine, Prescription.

Admin Dashboard

Login → Dashboard → Add/Manage Admin → Add/Manage Doctor → Add/Manage Patient → Manage Appointments → Billing → Medicine → Reports.

Staff Dashboard

Login → Register Patient → Book Appointment → Patient Check-in → Prescription → Generate Bill.

Doctor Workflow

Admin adds Doctor → Staff books appointment → Doctor consults patient → Prescription → Billing.

Patient Workflow

Patient visits → Registration → Appointment → Check-in → Consultation → Prescription → Bill → Payment.

Overall Flow

main.py → Login → Dashboard (Admin/Staff) → Module → Validation → MySQL → Success.
